Election/Restriction

I. Claims 1-4, 9-12 and 19-22 are drawn to lossless coding of an image in which difference value between pixel value and predicted pixel value is formed for each pixel in the block, classified in 382, subclass 236.

II. Claim 5-8, 13-18 and 23 drawn to a lossless coding of an image in which each difference value predicted by the set on non-dc predictor coefficient is limited to selected range of values having a selected maximum value, classified in 382, subclass 239.

2. The inventions are distinct from each other because of the following reasons:

Invention I and II are related as subcombination disclosed as usable together in a single combination. The subcombination are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as pixel block encoding and invention II has separate utility such as adaptive encoding based on the selection of encoding criteria.

3. Because these inventions are distinct for the reasons given above and acquired separate status in the art restriction for examination purposes is proper.
